

STANNOL
PIONEERS OF SOLDERING

PRESS RELEASE

07.08.2024

Stannol publishes second report in accordance with the German Sustainability Code (DNK)

For the second time, Stannol GmbH & Co. KG has submitted a voluntary sustainability declaration as part of the German Sustainability Code (DNK). The report deals with the specific sustainability strategies and measures implemented by the company in 2023. In accordance with twenty defined DNK criteria and performance indicators, Stannol provides detailed information on areas such as resource management, climate-relevant emissions, responsibility and human rights.

Focus on fair and recycled tin

"We were able to further improve in many areas. For example, the proportion of fair and recycled tin is now 93 percent - that's almost 40 percent more than in 2020. Our clear strategy is to cover our needs exclusively with recycled and fair tin. This is our most important area of action within the supply chain in order to reduce our environmental impact," emphasises Susanne Schlüter, Management Assistant and responsible for the report. By switching to green electricity, biogas and consistently changing its vehicle fleet strategy, the company has also been able to reduce its emissions by 90 percent since 2019 (2019: 750 t CO_{2e}; 2023: 70 t CO_{2e}).

The Sustainability Code was drafted by the German Council for Sustainable Development (RNE). It was first appointed in 2001 by the then Federal Government. The Sustainability Code supports companies in developing a sustainability strategy and provides an introduction to structured sustainability reporting. If regular reports are submitted, the development of the company can be tracked over time.

The DNK database

The Sustainability Code database can also be used to directly compare the reports of over 1,000 registered companies. The Code provides guidance on how the CSR reporting obligation and the National Action Plan for Business and Human Rights can be implemented in practice. Users include large and small, public and private companies, both those subject to reporting requirements and those not subject to reporting requirements.

The detailed [Stannol DNK report](#) can be found in the DNK database in German and English.

About Stannol GmbH & Co. KG

Stannol can look back on a long tradition in solder production: the company has been combining experience and progress in its products for over 140 years. To this day, Stannol is considered a pioneer of modern soldering technology and is firmly established as a brand on the market. The company specialises in the production of solder wires, solder pastes, fluxes and solder bars. The product range also includes measuring and testing equipment, protective coatings, cleaners and other accessories. In addition to its high quality standards, Stannol is committed to sustainable and ecological production: Under the name greenconnect, the company offers a complete product range that focuses on sustainability and fairness.
