# Duty to provide information in accordance with §15 section 1 of the Packaging Law

## 1. Packaging take-back at commercial collection points

We, Stannol GmbH & Co. KG, comply with our legal obligations under the national packaging law (VerpackG) and would like to inform you about the specific arrangements in our company:

According to § 15 section 1 VerpackG, the manufacturer and subsequent distributors in the supply chain of transport packaging, reusable packaging, sales packaging and secondary packaging with or without fillers containing harmful substances are obliged to take back used, completely empty packaging of the same type, shape and size. The producer is every distributor who puts packaging filled with goods into circulation for the first time on a commercial basis in Germany.

In accordance with the statutory provisions of the Packaging Act, the packaging shall be taken back free of charge at the place where it is actually handed over or in the immediate vicinity. This means for the packaging put into circulation by us: In the case of delivery ex works, the actual handover of the packaging takes place at Stannol GmbH & Co KG. This is therefore also the place where the packaging is taken back. The prerequisite for taking back the packaging is prior notification and agreement with us. Therefore, please contact us to coordinate the further procedure:  
Stannol GmbH & Co. KG, Haberstr. 24, 42551 Velbert, Tel. +49 2051 3120 127 / Mr. Kotzur.

Reusable packaging (e.g. pallets, pallet cages, etc.) is traded in exchange. This will ensure a return. You can make an optional special agreement with us regarding the return of packaging or refrain from returning it to us. Please consult your contact person in our sales department regarding the special agreement.

## 2. Basic return conditions

When returning empty packaging, the following return conditions must be complied with:

- The end user is responsible for ensuring that the packaging is completely empty. This means that its contents must have been exhausted in accordance with its intended use, and consequently it must be emptied in such a way that it is free of trickles, drips and is spatula-clean. No residues of the contents must adhere to the outside of the packaging.
- The packaging must be properly closed if the packaging has a closing device.
- The packaging must bear the product label and, if applicable, the dangerous goods marking of the last filling material legibly and completely visible.
- The packaging must be sorted according to the material fractions of the materials used.
- Packaging of pollutant-containing and non-pollutant-containing filling materials, as far as it is packaging not subject to system participation, is usually taken back in separate fractions.

If you have any further questions, please do not hesitate to contact us to coordinate the further procedure.
